

Maqsood Ahmed

AI / ML Engineer · Full-Stack Developer

mailto: maqsoodahmed.bscsfkhp@iba-suk.edu.pk **Contact:** +92 308 242 9563

location: Karachi, Pakistan **LinkedIn:** www.linkedin.com/in/maqsood-ahmed-developer

PROFILE SUMMARY

Computer Science graduate with hands-on experience in machine learning, AI-powered REST APIs, and full-stack web development. Proficient in Python (scikit-learn, NumPy, Pandas) and the MERN stack, with a strong ability to integrate ML models into real-world applications. Passionate about writing clean code and building solutions that make a genuine impact.

TECHNICAL SKILLS

AI / ML	scikit-learn, deep learning, model training & evaluation, feature engineering, NLP (TF-IDF), classification, regression, data preprocessing, cross-validation
Computer Vision	DeepAR, augmented reality (AR), real-time image processing, object detection, virtual try-on, OpenCV
Languages	Python, JavaScript, Java, C++
Backend	Node.js, Express.js, REST APIs, JWT authentication
Frontend	React.js, Tailwind CSS, Chart.js, React-Redux
Databases	MongoDB, MySQL
Tools	Git, GitHub, Postman, Cloudinary, Multer

EDUCATION

BS Computer Science | Sukkur IBA University, Sukkur, Pakistan

May, 2026

- Relevant Coursework: Machine Learning, Deep Learning, Enterprise Application Development, Data Structures & Algorithms, Database Management Systems, Web Engineering, Object-Oriented Programming, Probability & Statistics

PROJECTS

Virtual Footwear Try-On System (FYP) | <https://github.com/Maqsood-Ahmed110/virtual-footwear-tryon-system.git> 2025–2026

- Built a web-based AR try-on tool where users can see how shoes look on their feet in real time — powered by DeepAR SDK for foot tracking and 3D overlay.
- Handled the full stack: CV model on the backend, React.js interface on the front, connected via a Node.js REST API.
- Focused heavily on reducing lag in the AR rendering to keep the experience smooth on mobile browsers.

Email Spam Classification System | <https://github.com/Maqsood-Ahmed110/Email-classification-web-app.git> 2024–2025

- Trained a Logistic Regression classifier on email text using TF-IDF features — hit above 95% accuracy on the test set.
- Built the full pipeline myself: raw email in, preprocessing (tokenisation, stopword removal), feature extraction, model training, then wrapped it in a REST API so the frontend could call it live.
- Wired up the predictions to a React + Tailwind frontend with a MySQL backend handling user accounts via JWT.

Full-Stack Finance Tracker | <https://github.com/Maqsood-Ahmed110/Finance-Tracker.git>

2024

- Let users track income and expenses by category; used MongoDB aggregation to compute summaries and Chart.js to plot them in a React dashboard.
- Wrote the REST API in Node.js/Express with Mongoose handling the data schema.

ACHIEVEMENTS

12-Hour Coding Hackathon — Sukkur IBA University

April 2025

- Shipped a working web app in 12 hours with a team of four — we split tasks fast, kept scope tight, and had something live by the deadline.
